UNSW Science and Computer Science. Customer-facing problem-solver who troubleshoots, documents, and resolves — and uses AI daily to do it faster. Strong written communication, calm under pressure, and a fast self-directed learner across new technical stacks.

EDUCATION

University of New South Wales — Bachelor of Science and Computer Science

Expected Dec 2026

Relevant coursework: Computer Networks & Applications, Operating Systems, Software Construction Techniques & Tools, Data Structures & Algorithms, Professional Issues & Ethics in Software.

TECHNICAL SKILLS

Core strengths: troubleshooting & root-cause analysis, clear written customer communication, documentation & process mapping (AS-IS → TO-BE), debugging, fast self-directed learning of new stacks, calm and methodical under pressure, attention to detail

Languages: Python, JavaScript / Node.js, Bash / shell, HTML, CSS, C, Java

Microsoft & tools: Microsoft Copilot & Copilot Studio, Microsoft Office / Excel, Git & GitHub (gh CLI), VS Code, Linux/Unix basics, networking fundamentals (coursework: DNS, HTTP, TCP/IP)

AI & Automation: Claude (custom skills, hooks, orchestration, agentic management), prompt engineering, MCP connectors (Composio, Zapier), REST API integration, workflow & process automation, multi-agent design

EXPERIENCE

AI Trainer — Outlier (Freelance / Contract)

May 2024 – Present

- Review and evaluate AI-generated responses (text, code, images, design) for accuracy, clarity, and relevance; diagnose and document errors and inconsistencies to improve model output.
- Apply consistent, detail-focused criteria and clear written feedback, the same critical-thinking-plus-documentation loop a support queue runs on.

Customer Service & Admin — Retail & Hospitality (Woolworths; Oliver Brown; Private Cleaning Business)

2021 – 2023

- Frontline customer support: resolved enquiries, handled bookings, and kept accurate records in fast-paced environments while staying calm and methodical under pressure.
- Communicated clearly with customers to understand a problem, set expectations, and follow through to resolution.

Social Media — Freelance

Jan 2023 – May 2023

- Managed TikTok, Instagram, and YouTube for a business; used Shopify analytics to adjust ad planning and responded to customer enquiries promptly.

PROJECTS

Claude Session Continuity — Persistent-Memory Skills for Claude Code

github.com/byun-alex/claude-session-continuity

- Built and open-sourced custom Claude Code slash-commands and hooks that give the AI assistant persistent cross-session memory, automatically logging each work session into a structured, reusable handoff.
- Cut session re-orientation from minutes of re-explaining context to a ~10-second read; a central diary keeps every project's history browsable so work can be picked up cold by the user or anyone else.
- Designed a fixed entry schema as the contract between the writer (/wrapup) and reader (/catchup) commands — process documentation produced as a side effect of working.

Brain Dashboard ("Jarvis") — Local AI Control-Center App

github.com/byun-alex/brain-dashboard

- Built a Node.js web app that orchestrates the Claude CLI behind a clean UI, with project-context switching, model selection, and live per-message token/cost tracking.
- Embedded a real terminal in the browser (WebSocket → ConPTY via node-pty + xterm.js); diagnosed and fixed a Node 24 / Windows PTY incompatibility by identifying the correct prebuilt binding.
- Vanilla JS/HTML/CSS front end and a plain Node back end, lightweight and dependency-minimal by design.

Content Factory — AI Content Automation Pipeline

github.com/byun-alex/content-factory

- Designed an end-to-end pipeline where Claude orchestrates multiple AI tools to produce long-form videos from a single brief.
- Integrated external services via API/MCP: **Suno** through the **Composio** connector for audio and **Higgsfield** for visuals, with **FFmpeg** handling assembly (audio crossfades, looped visuals to target runtime, duration verified with fprobe).
- Built deliberate human approval gates and run-logging so the workflow is repeatable, traceable, and quality-controlled.

ADDITIONAL

Languages: English (native), Korean (proficient), Japanese (intermediate)

Eligibility: Australian citizen · Full driver's licence · Sydney-based, available for fully remote work

Availability: Available immediately for full-time work, including the role's Sydney-time hours
